# Manual J Residential Load Calculation (8th Edition - Full)

## Synopsis

Manual J 8th Edition is the national ANSI-recognized standard for producing HVAC equipment sizing loads for single-family detached homes, small multi-unit structures, condominiums, town houses, and manufactured homes. The manual provides quick supplemental details as well as supporting reference tables and appendices. A proper load calculation, performed in accordance with the Manual J 8th Edition procedure, is required by national building codes and most state and local jurisdictions.

## Customer Reviews

This is a very technical book that is best avoided by the DIYer. It is designed for HVAC professionals and those planning on entering the trade. I would also recommend it for general contractors and architects that need to know something about working with and around HVAC. Its easier for a contractor to coordinate HVAC and plumbing if the needs of both trades are understood (at least a little).

An excellent reference for those interested in understanding the impact building materials choices have on HVAC system sizing. Definitely worth the money. I used it (hard copy) in conjunction with ACCA's MJ8 spreadsheets. Doing that allows you to work with finer precision than third party software programs allow for. The latter compiled tools are of course probably better if you are totally new to Manual J concepts.

Very technical. Also wrote in a very confusing manner. I ended up buying j load software and returning the book. I also can not understand why no used j load manuals are for sale?

I was able to use the Manual J spreadsheet provided by ACCA and easily produced a heat loss/gain for my house.

waste of money

Best pricing.

Thought it was software program. Paperback takes too long.
