Principles Of Magnetohydrodynamics: With Applications To Laboratory And Astrophysical Plasmas

Synopsis

This volume describes the two main applications of plasma physics--laboratory research on thermo-nuclear fusion energy and plasma astrophysics of the solar system and stars and accretion disks--from the single viewpoint of magnetohydrodynamics (Mhd). This approach provides effective methods and insights for the interpretation of plasma phenomena on virtually all scales, ranging from the laboratory to the universe. The text will be of value to senior-level undergraduates and graduate students in physics, astrophysics and magnetohydrodynamics.

Book Information

Paperback: 632 pages

Publisher: Cambridge University Press; 1 edition (August 23, 2004)

Language: English

ISBN-10: 0521626072

ISBN-13: 978-0521626071

Product Dimensions: 6.8 x 1.3 x 9.7 inches

Shipping Weight: 2.7 pounds (View shipping rates and policies)

Average Customer Review: 4.4 out of 5 stars 2 customer reviews

Best Sellers Rank: #438,401 in Books (See Top 100 in Books) #55 in [Books > Science & Math > Physics > Electromagnetism > Magnetism](#) #243 in [Books > Science & Math > Physics > Nuclear Physics](#) #1428 in [Books > Textbooks > Science & Mathematics > Physics](#)

Customer Reviews

"This volume is a superb and comprehensive...book discussing methods and insights about plasmas at all scales, from lab to cosmos. This promises to be a classic MHD text..." T. Eastman, formerly, University of Maryland, CHOICE "An outstanding contribution to the subject of MHD theory and its applications." Journal of Fluid Mechanics "Principles of MHD illustrates key concepts in plasma physics with applications from both the laboratory and astrophysics, wherever possible. These complement each other, and are structured coherently. The text strikes a nice balance between rigorous development of important mathematical methods, clear explanation of technical concepts, and connections to familiar examples." - American Journal of Physics, Daniel V. Schroeder, Weber State University

This book describes the two main applications of plasma physics, laboratory research on thermo-nuclear fusion energy and plasma astrophysics of the solar system, stars and accretion

disks, from the single viewpoint of magnetohydrodynamics (MHD). This approach provides effective methods and insights for the interpretation of plasma phenomena on virtually all scales, ranging from the laboratory to the universe. This text will be of value to senior-level undergraduates and graduate students in departments of physics and astrophysics taking courses on magnetohydrodynamics.

If you need a primer on magnetohydrodynamics (MHD) that is still in print, this is probably the best book you can get.

I am having this book as a textbook in a Space Plasma Physics Course. It is outstanding, and very helpful. I highly recommend it.
